

Feed Service API Documentation

Overview

The Feed Service provides endpoints for generating personalized feeds for users based on their preferences, followed accounts, and recent interactions.

Endpoints

Get Personalized Feed [GET /api/feed]

Retrieve a personalized feed for the authenticated user.

Request

```
GET /api/feed
```

Response

Upon successful feed retrieval, the server responds with a status code of **200 OK** and returns a list of content items in the feed.

```
HTTP/1.1 200 OK
Content-Type: application/json

[
  {
    "contentId": 1,
    "userId": 2,
    "contentType": "text",
    "text": "This is a sample text post.",
    "createdAt": "2024-04-10T12:00:00Z"
  },
  {
    "contentId": 2,
    "userId": 3,
    "contentType": "image",
    "imageUrl": "https://example.com/image.jpg",
    "createdAt": "2024-04-10T12:30:00Z"
  }
]
```

Like Content [POST /api/feed/{contentId}/like]

Like a specific content item in the feed.

Request

```
POST /api/feed/1/like
```

Response

Upon successful content liking, the server responds with a status code of **200 OK**.

```
HTTP/1.1 200 OK
```

Share Content [POST /api/feed/{contentId}/share]

Share a specific content item from the feed.

Request

```
POST /api/feed/2/share
Content-Type: application/json

{
  "recipientId": 4
}
```

Response

Upon successful content sharing, the server responds with a status code of **200 OK**.

```
HTTP/1.1 200 OK
```
